

BIO PLASTIC

Packaging made of bioplastics

We can also manufacture our large load carriers from **Bio-HDPE**, which is obtained from sugar cane. The benefit: the production of an organic HDPE does not cause **any emissions**, but it on the contrary binds CO₂ from the atmosphere.

+ No differences to fossil HDPE

+ Climate-friendly

+ 100 % recyclable

+ Identical material cycle

➤ Save CO₂,
protect the climate!

OCEAN PLASTIC

Packaging made of old fishing nets

Another material source that we can use to manufacture large load carriers is **Ocean Plastic**. This comes from old, recycled **fishing nets**. Instead of dumping them into the sea, they are **collected** and **recycled**.

+ Less plastic waste

+ Less contamination

+ Improved use of resources

+ 100 % recyclable

➤ Help us to keep
the oceans clean!
